# Daksh Agrawal

Data Engineer

Udaipur, India | +91 90572 53974 | dakshagrawalx@gmail.com | linkedin.com/in/daksh-agrawal | daksh-agrawal.vercel.app

## Summary

Data engineer who builds platforms end to end, from ingestion and warehousing to the dashboards and tools people actually use. Currently the sole data engineer at a sports prediction-market trading firm, streaming **~36 GB/day** into an Iceberg lakehouse. Previously built LLM-enriched pipelines, ML valuation models and AI analytics tools for Square Peg's Global Tech Fund, and modernised reporting at a state water utility. Started building software at 13 and co-founded a logistics platform at 15 that grew to **270k+ app installs**.

## Experience

**Data Engineer** Jul 2026 – Present
*Cruz Trading, sports prediction-market trading firm (3 people)* *Remote (Australia)*

- Designed and shipped **the firm's data platform**: decisions, quotes, fills and order events from the live trading bot stream through Cloudflare Pipelines into Iceberg tables on R2, ingesting **~36 GB/day across 16 tables** with **no added latency** on the trading hot path.
- Built the **PnL ledger service**: a cron-driven Worker ingesting **~9,000 fills/day**, market resolutions and 5-minute position snapshots, making fills queryable within ~10 minutes and giving the desk its **first automated PnL record**.
- Audited all 32 warehouse tables: found a dedupe bug undercounting traded shares by **11.7%** and a capture gap missing up to **58% of taker fills**; devised a **sequence-based completeness check** that verified every other stream at 100%.
- Built the internal analytics dashboard (TypeScript, Cloudflare Workers, R2 SQL) querying the Iceberg warehouse directly through a caching proxy instead of rollup tables; a month of queries (159 GB scanned) cost **under $1**.
- Reconciled the platform's cost model against actual billing (**~$57/month** run rate), **cancelling a planned pipeline re-architecture** that would have saved nothing.
- Diagnosed a stalled table-compaction failure in a beta managed service by pulling **852 maintenance runs** through its API and isolating the trigger to a two-minute window for vendor escalation.
- Wrote the data-infrastructure roadmap, architecture decision records and deploy runbooks, and built an internal publishing site (Next.js, ECharts) for plans and analyses.

**Data & AI Engineer Intern** Mar 2025 – Jan 2026
*Square Peg Capital, Global Tech Fund (public-market tech equities)* *Melbourne, VIC*

- Engineered an **LLM-enriched ingestion pipeline in Snowflake**, automating ingestion and enrichment of **500k+ data points** on listed tech companies used to validate investment decisions.
- Built **ML models predicting valuation multiples** for listed tech equities, and automated capital forecasting and budgeting analysis for the investment team.
- Designed a **RAG system** on Claude and Llama APIs over **3,000 hours of unstructured content**, powering an AI agent that answers investor queries with verifiable citations.
- Shipped a Python **self-serve analytics agent** embedded in Slack and Notion, automating **~110 queries a day** and saving the team **~20 hours a week**.
- Built **fund performance reporting dashboards** (Hex, Deepnote) and internal tools on Next.js, PostgreSQL (Supabase, Prisma) and Cloudflare.

**Data Scientist (Graduate Program)** Feb 2026 – Jul 2026
*TasWater, Tasmania's state water and sewerage utility* *Hobart, TAS*

- Built and automated SQL Server and Azure pipelines feeding executive Power BI dashboards, cutting manual reporting by **15+ hours a week**.
- Tuned legacy SQL queries and warehouse indexing for a **50% latency reduction**, enabling near-real-time refresh of operational metrics.

- Modelled core business KPIs with senior leadership, turning fragmented legacy data into structured assets that improved forecasting accuracy by **20%**.

**Data Analyst (Summer Placement)** Nov 2024 – Feb 2025
*TasWater* *Launceston, TAS*

- Integrated data from multiple source systems into the warehouse and data lake, and built Power BI dashboards for supply chain and procurement KPIs.
- Automated routine workflows, lifting team productivity by **40%+**; earned a **full-time graduate offer**.

**Co-Founder & CTO** Jul 2019 – Present
*G7 Smart Logistics, truck-booking platform (part-time since 2022)* *Udaipur, India*

- Built the platform from scratch at 15: native Android apps (Java, Kotlin), Laravel/MySQL APIs and web apps, growing to **270k+ installs** and **6,800+ onboarded service partners**.
- Ingest **~10k loads a day** from **free-text WhatsApp group posts** and normalise them into structured Postgres records (route, vehicle type, pickup time) for ~5k active transporters.
- Building a **load-ranking system** scoring distance, recency, post completeness and prior interaction; instrumented calls-per-load as the core matching metric.
- Won **India's #1 Start-up Award** at IIM Udaipur (200+ start-ups, only teenage founder); selected for Season 4 of national TV funding show *Horses Stable* and received a funding offer valuing the company at ~AUD 600k.

**Academic Tutor and Demonstrator** Feb 2024 – Nov 2025
*University of Melbourne, School of Computing and Information Systems* *Melbourne, VIC*

- Taught Python and algorithms in COMP10001 Foundations of Computing (tutor and demonstrator) and COMP10002 Foundations of Algorithms (demonstrator).

## Education

**The University of Melbourne** Jul 2022 – Jun 2025
*Bachelor of Science, Major in Data Science* *Melbourne, VIC*

## Technical Skills

| | |
|---|---|
| **Languages** | Python, SQL, TypeScript, Java, Kotlin, PHP |
| **Data processing** | pandas, Polars, Spark, DuckDB, scikit-learn |
| **Storage & warehousing** | Snowflake, Databricks, Apache Iceberg, Parquet, PostgreSQL, SQL Server, MySQL |
| **Cloud & infra** | Cloudflare (Workers, Pipelines, R2, R2 SQL), Azure (Data Factory), Supabase, Linux, git-based CI/CD |
| **BI & apps** | Power BI, Hex, Deepnote, ECharts, Next.js, React |
| **AI & LLMs** | RAG, agentic workflows, Claude / OpenAI / Llama APIs, LangChain |
| **Practices** | data modelling, data-quality auditing, performance tuning, cost modelling, architecture decision records |
